[Advanced Macroeconomics Jul 18 2021](#) The fifth edition of Romer's Advanced Macroeconomics continues its tradition as the standard text and the starting point for graduate macroeconomics courses and helps lay the groundwork for students to begin doing research in macroeconomics and monetary economics. Romer presents the major theories concerning the central questions of macroeconomics. The theoretical analysis is supplemented by examples of relevant empirical work, illustrating the ways that theories can be applied and tested. In areas ranging from economic growth and short-run fluctuations to the natural rate of unemployment and monetary policy, formal models are used to present and analyze key ideas and issues. The book has been extensively revised to incorporate important new topics and new research, eliminate inessential material, and further improve the presentation.

[Monetary Macrodynamics Jan 24 2022](#) This book investigates the interaction of effective goods demand with the wage-price spiral, and the impact of monetary policy on financial and the real markets from a Keynesian perspective. Endogenous business fluctuations are studied in the context of long-run distributive cycles in an advanced, rigorously formulated and quantitative setup. The material is developed by way of self-contained chapters on three levels of generality, an advanced textbook level, a research-oriented applied level and on a third level that shows how the interaction of real with financial markets has to be modelled from a truly integrative Keynesian perspective. Monetary Macrodynamics shows that the balanced growth path of a capitalist economy is unlikely to be attracting and that the cumulative forces that surround it are controlled in the large by changes in the behavioural factors that drive the wage-price spiral and the financial markets. Such behavioural changes can in fact be observed in actual economies in the interaction of demand-driven business fluctuations with supply-driven wage and price dynamics as they originate from the conflict over income distribution between capital and labour. The book is a detailed critique of US mainstream macroeconomics and uses rigorous dynamic macro-models of a descriptive and applicable nature. It will be of particular relevance to postgraduate students and researchers interested in disequilibrium processes, real wage feedback channels, financial markets and portfolio choice, financial accelerator mechanisms and monetary policy.

[The Economics of Money, Banking, and Financial Markets Jul 26 2019](#) Economics of Money, Banking, and Financial Markets heralded a dramatic shift in the teaching of the money and banking course in its first edition, and today it is still setting the standard. By applying an analytical framework to the patient, stepped-out development of models, Frederic Mishkin draws students into a deeper understanding of modern monetary theory, banking, and policy. His landmark combination of common sense applications with current, real-world events provides authoritative, comprehensive coverage in an informal tone students appreciate.

[Prosperity without Growth May 16 2021](#) What can prosperity possibly mean in a world of environmental and social limits? The publication of Prosperity without Growth was a landmark in the sustainability debate. Tim Jackson's piercing challenge to conventional economics openly questioned the most highly prized goal of politicians and economists alike: the continued pursuit of exponential economic growth. Its findings provoked controversy, inspired debate and led to a new wave of research building on its arguments and conclusions. This substantially revised and re-written edition updates those arguments and considerably expands upon them. Jackson demonstrates that building a 'post-growth' economy is a precise, definable and meaningful task. Starting from clear first principles, he sets out the dimensions of that task: the nature of enterprise; the quality of our working lives; the structure of investment; and the role of the money supply. He shows how the economy of tomorrow may be transformed in ways that protect employment, facilitate social investment, reduce inequality and deliver both ecological and financial stability. Seven years after it was first published, Prosperity without Growth is no longer a radical narrative whispered by a marginal fringe, but an essential vision of social progress in a post-crisis world. Fulfilling that vision is simply the most urgent task of our times.

[Macroeconomics Nov 02 2022](#) Dornbusch, Fischer, and Startz has been a long-standing, leading intermediate macroeconomic theory text since its introduction in 1978. This revision retains most of the text's traditional features, including a middle-of-the-road approach and very current research, while updating and simplifying the exposition. This revision focuses on making the text even easier to teach from. The only pre-requisite continues to be principles of economics.

[Macroeconomics, Theories and Policies Aug 26 2019](#) This book traces the history of macroeconomics, the evolution of macroeconomic thought, and the resulting theory and policy. The book places the various macroeconomic theories in the order in which they developed chronologically, and illustrates the similarities and differences of the models. Starting with classical economics and the Keynesian revolution, this book explores the macroeconomic theory after Keynes, open economy macroeconomics, economic policy, and sectoral functions. Financial officers and professionals making pecuniary decisions and analyses.

[Open Economy Macrodynamics Jul 30 2022](#) In the first part of this book, we treat interacting and small open economies. We do this from an historical perspective, starting from the Classical model of the gold standard and the specie-flow mechanism and aim to show that the Dornbusch IS-LM-PC approach, with or without rational expectations, can still be considered as a (if not the) core contribution to contemporaneous open economy macrodynamics, also on the level of structural macroeconomic model building. In the second part we then extend this analysis to the incorporation of more disequilibrium on the real markets, prominent further feedback channels of the macrodynamic literature and integrated macromodel building. We start from the closed economy, consider large open economies in a fixed exchange rate system, small open economies subject to high capital mobility, and finally two large interacting economies like the USA and Euroland. Our macrofounded approach extends and integrates non-market clearing traditions to macrodynamics and can be usefully compared with the New Keynesian approaches which are generally rigorously microfounded, but often much more limited in scope in capturing full market and agent interactions.

Political Economy of the Environment Oct 21 2021 This book is the culmination of several years work by a group of academics, policy-makers and other professionals looking to understand how alternative economic thinking – and indeed thinking from quite different social-scientific disciplines – could enhance the mainstream economic approach to environmental and natural-resource problems. Of the editors, Dietz comes from the mainstream economics tradition, while Michie and Oughton draw explicitly on institutional and evolutionary economics. The various authors represent a range of disciplinary backgrounds and approaches. This book draws on the strengths of each and all of these approaches to analyse environmental issues and what can be done to tackle these through corporate and public policy. The book argues that the need for an inter-disciplinary approach. Two themes which emerge repeatedly throughout the book are the need for an interdisciplinary theory of technological change, and the need for a similarly interdisciplinary approach to the study of human behaviour and how it influences both production and consumption choices. The two themes are of course related. Resolving environmental questions requires an understanding of their nature, of their causes and, to the extent that they are anthropogenic, of how to change human behaviour. These fundamental issues are the focus of the four chapters that form Part 1 of this volume. The remainder of the volume develops them in more detail.

Foundations of Economics May 28 2022 Foundations of Economics, Second Edition, is a concise text for non-specialist students taking one semester economics modules. This new edition offers the proven consistency, quality, and clarity of the parent text, Economics Seventh Edition, the “student bible” (BBC Radio Four) in the discipline.

Is There Progress in Economics? Apr 14 2021 Is There Progress in Economics? should be given relatively high marks. First, the quality of the papers is quite high, and second, the editors did a relatively good job of selecting, arranging and editing the contributions so that the volume really does focus on the question in its title. The editors introduction also contributes to the overall effect by attempting to tie all of the papers together into a reasonably tight bundle. D. Wade Hands, Economic Record This thought-provoking book discusses the concept of progress in economics and investigates whether any advance has been made in its different spheres of research. The authors look back at the history, successes and failures of their respective fields and thoroughly examine the notion of progress from an epistemological and methodological perspective. The idea of progress is particularly significant as the authors regard it as an essentially contested concept which can be defined in many ways theoretically or empirically; locally or globally; or as encouraging or impeding the existence of other research traditions. The authors discuss the idea that for progress to make any sense there must be an accumulation of knowledge built up over time rather than the replacement of ideas by each successive generation. Accordingly, they are not concerned with estimating the price of progress, reminiscing in the past, or assessing what has been lost. Instead they apply the complex mechanisms and machinery of the discipline to sub-fields such as normative economics, monetary economics, trade and location theory, Austrian economics and classical economics to critically assess whether progress has been made in these areas of research. Bringing together authoritative and wide-ranging contributions by leading scholars, this book will challenge and engage those interested in philosophy, economic methodology and the history of economic thought. It will also appeal to economists in general who are interested in the advancement of their profession.

Small Corpus Studies and ELT Feb 22 2022 Recent developments in this field of small corpus studies, largely brought about by the personal computer, have yielded remarkable insights into the nature and use of real language. This book presents work by a number of leading researchers in the field and covers a series of topics directly related to language teaching and language research. The ultimate aim of this book is to encourage the exploitation of small corpora by the ELT profession to make language learning more effective. In addition to descriptions of the basic corpus analysis tools, chapters in the collection cover syllabus and materials design, comparisons of different genres, descriptions of local and functional grammars, compilation and use of learner corpora, and making cross-linguistic comparisons. The message of this collection is that language use is purposeful and culture specific and that small corpus analysis is an effective method of linguistic investigation."Preface by: " John Sinclair;

Managerial Economics and Business Strategy Mar 14 2021 Baye's Managerial Economics and Business Strategy is one of the best-selling managerial economics textbooks. The Metaphysics of Capitalism Sep 19 2021 The objective of this book is to construct an individually emancipatory economic and political philosophy. This means a concrete-based, man-centered, non-hypostatizing, anti-dialectical approach to the

apprehension of the material, i.e. nature in general. This constitutes an emancipation from culture-based understandings of reality, and in particular from the metaphysically biased type of culture represented by capitalism. The proposed philosophical emancipation means individual liberation from the logically flawed, massifying character of the dominant mode of thought of capitalist times. From these bases, the social sciences can also be reformulated. Micocci argues that capitalism can be conceptualized as a limited and limiting socialized mode of thought, an intellectuality whose dialectical features are effectively identified by using the proxy of political economy, both marxist and mainstream. Political economy in fact, being a most representative instance of dialectical thinking, mirrors the dialectical nature of capitalist economic and political relationships. According to Micocci, non-dialectical occurrences in capitalism are simply excluded from normal social, economic, and intellectual activities, which are performed in a metaphysical, intellectually isolated environment. In capitalism, therefore, the materials, the concrete, i.e. nature itself, is not considered as a whole but only as occasional instances. Micocci describes capitalism, in sum, as an intellectually constructed culture (a metaphysics) which preserves itself, and props itself up, by means of its iterative (market-like) functioning.

The Sustainable City VIII (2 Volume Set) Jun 16 2021 With majority of the Earth's people now urban dwellers, and cities being the most efficient habitat for the utilisation of resources, it is imperative that we continue to support standards of living and efficiencies of urban areas. However, the urbanisation process has not been without its problems. While much has been done to address the original issues surrounding the quality of urban life, new challenges continue to arise. It is no longer sustainable to achieve improvements by means that require greater and greater energy consumption as we did in the past. Despite their complexity, however, cities are a great laboratory for architects, engineers, and other key professionals to apply new ideas and new technology to meet our requirements for more sustainable city environments. Containing papers presented at the latest in a series of conferences organised by the Wessex Institute of Technology, these proceedings, split in to two volumes address not just environmental, architectural, and engineering concerns, but also quality of life, security, risk, and heritage. The diversity of topics and the case studies based on existing projects make the book an important contribution to the literature on urban planning.

Disequilibrium, Growth and Labor Market Dynamics Oct 09 2020 In this book on disequilibrium, growth and labor market dynamics we take predominantly a macroeconomic perspective. We present a working model that can easily be varied in different directions in order to subsume innovations in the literature on macroeconomics, old and new, and to contribute to important currently discussed macroeconomic issues. Our working model is set up in a way that there is a close relationship between our presented dynamic models and modern macro econometric models with disequilibrium both in the labor and the goods markets. One of our objectives is, therefore, to narrow the gap between theoretical and applied structural macrodynamic model building. We hope that the book will be a useful reference for all researchers, academic teachers and practitioners of macroeconomic and macro econometric model building who are interested in economic dynamics, independently of whether they use equilibrium or disequilibrium methods in their own research. We base this hope on the fact that our approach contains a number of unique features. The emphasis on the identification and analysis of the basic feedback mechanisms at work in modern macro economies. A detailed study of the partial as well as integrated dynamic interaction between these feedback mechanisms that constitute the interdependence of markets and sectors of the modern macro economy. The relationship between the macroeconomic framework of our working model and the Walrasian, Non-Walrasian and New-Keynesian reformulations of macroeconomics.

Visible Learning Aug 07 2020 This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

Economic Progress and Growth Sep 07 2020 This volume puts forward a group of models applied to different economies, capturing the progress and growth of their economic systems. The models provide a quantified framework for the formulation of economic policy. They aid the introduction of targets and policy instruments taking account of constraints in the process of development. Also, an evaluation of external and internal shocks is taken using a comparative static type of analysis. The models take into account constraints which are in the nature of institutional as well as supply constraints. Problems of data exist in any quantitative analysis and account was taken of this factor in presenting the models and the results reached. Nonetheless, the models attempt to specify, estimate and simulate a given macroeconomic system. Models of this type are not freely available to the interested reader, but only in a fragmented way. This book puts the efforts of a group of economists worldwide under one cover. It is believed that the collection will be of interest both for courses in planning and for those advising these countries such as international organizations, research bodies, etc. Moreover, an overview of trade policy and income distributional factors is presented. It is hoped that this collection will prove interesting and useful to economists world wide.

Dialogue within Discourse Communities Nov 09 2020 The book explores aspects of reflexivity and interactivity in a variety of academic genres: oral and written, scientific and educational. Academic discourse is explored from a variety of perspectives that take a dialogic view of language use as their starting point, ranging from conversation analysis to descriptive or applied genre studies. Particular attention is paid to the way metadiscursive expressions contribute to a representation of the communicative procedures that characterise the ongoing (scientific and educational) dialogues.

Interrogating Alterity Dec 23 2021 Alternative ways of thinking, analysing and performing economic geographies have become increasingly significant in recent years, partly due to the recent financial crisis, which has had social and political consequences throughout the world. Yet there is a danger that the debate about alternatives may become simply a way of fixing global capitalism in its present crisis-ridden form. Instead, the analysis of alternative economic spaces must continue to offer a critique of the very notion of capitalism as a universal, if variable, set of social relations. This important book brings together critical analyses of alterity from across the social sciences and humanities, refining and advancing what alternative economies and polities are, how they are formed, what difficulties and problems they face, and how they might be sustained. A central theme is the need to examine critically both the material contexts and the conceptual categories deployed in the making of alternative economies.
