[Bulls, Bears and Golden Calves](#) Apr 16 2021 Self-interest, economic efficiency and private property rights are among the most basic assumptions of market economics. But can an economic theory built on these assumptions alone provide adequate insight into human nature, motivation and ultimate goals to guide our economic life? John Stapleford says no along with those economists who recognize the limits of their discipline. He insightfully shows us in detail how ethics are inextricably intertwined with economic life and analysis. Writing from a Christian ethical perspective, he interacts with seven standard introductory economics texts, exploring the moral challenges imbedded in various macro-, micro- and international economic theories and outlining a faithful response to them. Among the important ethical issues addressed are possibilities and perils of economic growth the role of government in the economy the growth of work and loss of leisure lending and borrowing poverty and distributive justice environmental stewardship business and social responsibility legalized gambling the pornography industry debt relief for less developed countries the economics of immigration population control Keyed to seven of the most widely used introductory economics texts--Gwartney, Stroup & Sobel; Mankiw; Mansfield & Behraves; McConnell & Brue; Miller; Samuelson & Nordhaus; and Stiglitz--this book will be especially useful for introductory courses in economics.

Contemporary Labor Economics Aug 21 2021 "One benefit of authoring a text that has met the test of the market is the opportunity to revise. Revision provides for improvement-to delete the archaic and install the novel, to rectify errors of

omission or commission, to rewrite misleading or obscure statements, to introduce more relevant illustrations, to bring more recent data to bear, to upgrade organizational structure, and to enhance pedagogical aids-in short, to build on an accepted framework of ideas. We feel that those who examine this new twelfth edition of Contemporary Labor Economics will agree that we have fully exploited this opportunity"--

Economic and Financial Analysis for Criminal Justice Organizations Aug 28 2019 From small law offices to federal agencies, all entities within the justice system are governed by complicated economic factors and face daily financial decision-making. A complement to Strategic Finance for Criminal Justice Organizations, this volume considers the justice system from a variety of economic and financial perspectives and introduces quantitative methods designed to improve the efficiency and effectiveness of organizations in both the non-profit and for-profit sectors. Using only a minimum of theory, Economic and Financial Analysis for Criminal Justice Organizations demonstrates how to make decisions in the justice system using multiple financial and economic models. Designed for readers with little knowledge of advanced mathematics, quantitative analysis, or spreadsheets, the book presents examples using straightforward, step-by-step processes with Excel and Linux Calc spreadsheet software. A variety of different types of decisions are considered, ranging from municipal bond issuance and valuation necessary for public revenues, pension planning, capital investment, determining the best use of monies toward construction projects, and other resource planning, allocation, and forecasting issues. From municipalities and police departments to for-profit prisons and security firms, the quantitative methods presented are designed to improve the efficiency and effectiveness of all organizations in the justice domain.

Learning Group Leadership Dec 01 2019 "The writing is both highly personable and also very specific about techniques and attitudes students may take on as they experiment with membership leadership. I think my students will like it and will use it to engage even more fully with the experiential group. It most certainly fills a niche that needed filling." —Adam L. Hill, Sonoma State University Now Accompanied by a DVD! Focusing on how to conduct and lead groups in a variety of therapeutic settings, Learning Group Leadership: An Experiential Approach, Second Edition covers theory, process, leadership, techniques, ethics, special populations, and challenges as they relate to group work. The Second Edition introduces important conceptual and practical information and then uses exercises, field study assignments, and personal application questions to help students apply concepts to their work and lives. The Second Edition now includes "student voices" throughout each chapter to provide descriptions of actual experiences. Key Features: Takes an experiential approach, helping readers understand how the concepts they learn in class can be applied to their own work in conducting groups Offers a conversational, practical, and realistic writing style Includes relevant examples drawn from the authors' more than 25 years of teaching and leading experience Is accompanied by a new DVD, bound in the back of the book, which contains scripted sessions corresponding with every chapter The password-protected instructor's site is available with test questions at <http://www.sagepub.com/kottler2einstr/main.htm>. [Click Here to Kill Everybody: Security and Survival in a Hyper-connected World](#) Sep 29 2019 A world of "smart" devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction, can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In *Click Here to Kill Everybody*, renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.

Lectures on Optimal Transport Sep 09 2020 This textbook is addressed to PhD or senior undergraduate students in mathematics, with interests in analysis, calculus of variations, probability and optimal transport. It originated from the teaching experience of the first author in the Scuola Normale Superiore, where a course on optimal transport and its applications has been given many times during the last 20 years. The topics and the tools were chosen at a sufficiently general and advanced level so that the student or scholar interested in a more specific theme would gain from the book the necessary background to explore it. After a large and detailed introduction to classical theory, more specific attention is devoted to applications to geometric and functional inequalities and to partial differential equations.

Theory of Shocks, COVID-19, and Normative Fundamentals for Policy Responses Jan 02 2020 The phenomenon of shocks is often mentioned in relation to economic crises but rarely studied. This gap in research has resulted in shocks being poorly understood, with no fundamental explanation of their inciting conditions. It is a system-forming problem that cannot be investigated without dynamic ideas about the economy, but an incomplete understanding of this event leaves economic systems vulnerable to collapse. *Theory of Shocks, COVID-19, and Normative Fundamentals for Policy Responses* is an essential publication that explores the factors that cause economic shocks and the mechanisms of their implementation. The book serves as a resource for the development of policy-oriented frameworks for achieving and maintaining national and international strategies to properly manage future global shocks. Featuring coverage of a wide range of topics including dialectics, self-evolution, and structural relationships, this book is ideally designed for economists, executives, managers, entrepreneurs, academicians, students, and researchers in the areas of finance, macroeconomics, economic theory, and risk assessment.

Technology Innovation Law and Practice: Cases and Materials Dec 13 2020 This book is a comprehensive collection of cases, statutes, regulations and readings focused on the commercial development of new technologies, primarily by start-up and early-stage companies. It defines the technology innovation process as the set of decisions and actions by which an invention is transformed from a laboratory prototype into a commercially viable product or process; and defines the technology innovation period as the time between the point of invention (reduction to practice) and the point of market introduction. *Technology Innovation Law and Practice* addresses the gap in academic attention paid to the field of technology innovation. The book provides students, faculty and practitioners, both in law and other disciplines, with a single source of in-depth information on the laws that affect the technology innovation process. The book is unique in its interdisciplinary focus, in its emphasis on start-up and early-stage technology companies, and in its combination of instructional and reference materials.

Regulating Mergers and Acquisitions of U.S. Electric Utilities: Industry Concentration and Corporate Complication Mar 16 2021 What happens when electric utility monopolies pursue their acquisition interests—undisciplined by competition, and insufficiently disciplined by the regulators responsible for replicating competition? Since the mid-1980s, mergers and acquisitions of U.S. electric utilities have halved the number of local, independent utilities. Mostly debt-financed, these transactions have converted retiree-suitable investments into subsidiaries of geographically scattered conglomerates. Written by one of the U.S.'s leading regulatory thinkers, this book combines legal, accounting, economic and financial analysis of the 30-year march of U.S. electricity mergers with insights from the dynamic field of behavioral economics.
