[Collections Vol 8 N4](#) Feb 21 2022 "Collections: A Journal for Museum and Archives Professionals" is a multi-disciplinary peer-reviewed journal dedicated to the discussion of all aspects of handling, preserving, researching, and organizing collections. Curators, archivists, collections managers, preparators, registrars, educators, students, and others contribute.

**Setting Priorities for Health Technologies Assessment** Sep 28 2022 The problem of deciding which health care technologies to evaluate is urgent. With new technologies proliferating alongside steadily increasing health care costs, it is critical to discriminate among technologies to direct tests and treatments at those who can benefit the most. Given the vast number of clinical problems and technologies to be evaluated, the many months of work required to study just one problem, and the relatively few clinicians with highly developed analytic skills, institutions must set priorities for assessment. This book sets forth criteria and a method that can be used by public agencies such as the Office of Health Technology Assessment (in the U.S. Public Health Service) and by any private organization conducting such work to decide which technologies to assess or reassess.

[Priorities in Teacher Education](#) Jul 02 2020 Good teacher education not only enhances the understanding and skills of new teachers, but increases the likelihood of them staying in the profession. In *Priorities in Teacher Education*, Clare Kosnik and Clive Beck argue that teacher preparation should be given sharper focus, identifying seven priority areas: program planning pupil assessment classroom organization and community inclusive education subject content and pedagogy professional identity a vision for teaching Long-time teacher education instructors and researchers themselves, the authors identified these priorities through literature-based research and the findings of a three-year study following twenty-two graduates through their first years of teaching. Packed with examples and quotes about these experiences, the book is broken down into seven chapters, each focusing on one of the seven priorities and containing a case study of one teacher whose experiences embody the priority being discussed. As the chapters progress, the authors increasingly demonstrate the interplay between the seven priorities, showing that none of them can be pursued in isolation, and building a comprehensive base of essential knowledge for beginning teachers. Teacher educators will find *Priorities in Teacher Education* a key guide to pre-service preparation, while new and student teachers will benefit enormously from reading the 'front line' accounts of their contemporaries.

**Superfund** Dec 19 2021 In the 1990s, creosote was discovered under a residential neighborhood in Manville, NJ. Creosote, a mixture of chemicals, is used to preserve wood products. Creosote may cause cancer. Creosote from a former wood-treatment facility had contaminated soil and groundwater at the site. EPA worked with the Army Corps of Engineers to clean up the site. As of May 2009, total site costs were almost \$340 million and remedial construction costs had exceeded original estimates. This report examined: (1) how EPA assessed risks and selected remedies for the site; (2) what factors contributed to the difference between the estimated and actual costs; and (3) how EPA and the Corps divided responsibilities for site work. This is a print on demand report.

[Knowing What Works in Health Care](#) Nov 06 2020 There is currently heightened interest in optimizing health care through the generation of new knowledge

on the effectiveness of health care services. The United States must substantially strengthen its capacity for assessing evidence on what is known and not known about "what works" in health care. Even the most sophisticated clinicians and consumers struggle to learn which care is appropriate and under what circumstances. *Knowing What Works in Health Care* looks at the three fundamental health care issues in the United States—setting priorities for evidence assessment, assessing evidence (systematic review), and developing evidence-based clinical practice guidelines—and how each of these contributes to the end goal of effective, practical health care systems. This book provides an overall vision and roadmap for improving how the nation uses scientific evidence to identify the most effective clinical services. *Knowing What Works in Health Care* gives private and public sector firms, consumers, health care professionals, benefit administrators, and others the authoritative, independent information required for making essential informed health care decisions.

**Digest of the United States Supreme Court Reports** Feb 09 2021

**Setting Priorities for Clinical Practice Guidelines** Oct 05 2020 This book examines methods for selecting topics and setting priorities for clinical practice guideline development and implementation. Clinical practice guidelines are "systematically defined statements to assist practitioner and patient decisions about appropriate health care for specific clinical circumstances." In its assessment of processes for setting priorities, the committee considers the principles of consistency with the organization's mission, implementation feasibility, efficiency, utility of the results to the organization, and openness and defensibility—a principle that is especially important to public agencies. The volume also examines the implications of health care restructuring for priority setting and topic selection, including the link between national and local approaches to guidelines development.

*The Precautionary Principle in EU Risk Regulation: A Matter of Priorities* Dec 27 2019 The precautionary principle provides a justification to act where scientific uncertainty about the nature and extent of detected indications of harm would otherwise possibly impede regulatory interventions. The highly controversial and often misunderstood principle plays a central role in European risk regulation. The present volume should allow readers to gain an overview of all essential points linked with the role of the principle in the risk regulation framework of the European Union. Based on an outline of the precautionary principle's main characteristics and its conception by the European Commission, common allegations brought against the principle are illuminated and critically assessed. The second part of the book is then devoted to the actual implementation of the principle in the EU – from early applications to ongoing disputes. Three case studies from the agrochemical, pharmaceutical and food packaging sector reflect current applications as well as the relevant institutional and procedural framework. Insights from the theoretical part and the case studies are melted in the final discussion section that also includes recommendations for EU risk regulators.

**Assessment of Mars Science and Mission Priorities** Jul 26 2022 Within the Office of Space Science of the National Aeronautics and Space Administration (NASA) special importance is attached to exploration of the planet Mars, because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made. The failures in 1999 of two NASA missions—Mars Climate Orbiter and Mars Polar Lander—caused the space agency's program of Mars exploration to be systematically rethought, both technologically and scientifically. A new Mars Exploration Program plan (summarized in Appendix A) was announced in October 2000. The Committee on Planetary and Lunar Exploration (COMPLEX), a standing committee of the Space Studies Board of the National Research Council, was asked to examine the scientific content of this new program. This goal of this report are the following: -Review the state of knowledge of the planet Mars, with special emphasis on findings of the most recent Mars missions and related research activities; -Review the most important Mars research opportunities in the immediate future; -Review scientific priorities for the exploration of Mars identified by COMPLEX (and other scientific advisory groups) and their motivation, and consider the degree to which recent discoveries suggest a reordering of priorities; and -Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities, and suggest any adjustments that might be warranted.

**Bridge Management: Proceedings of the Third International Conference** Oct 17 2021 This volume contains the papers presented at the Third International Conference on Bridge Management, held at the University of Surrey, Guildford, UK on 14-17 April 1996.

**National Priorities for the Assessment of Clinical Conditions and Medical Technologies** Aug 27 2022 The goal of the Institute of Medicine's Council on Health Care Technology is to promote the development and application of technology assessment in health and medicine. Among the activities cited in the congressional charge that provided for its formation, the council is to "identify needs in the assessment of health care technology." Early in its deliberations, the council decided to expand its charge to identify priority clinical conditions as well as medical technologies and practices. The process for setting assessment priorities demonstrated in this pilot study and the initial set of 20 priority assessment areas selected are in response to this expanded charge. The priority-setting group decided to undertake a pilot effort that would set a framework for national priority-setting, outline national priority-setting criteria, and use a consensus process to identify a preliminary list of priority clinical conditions and medical technologies. The priority-setting approach demonstrated here relies upon explicit criteria that are applicable at the national level and reflect the diverse needs of patients, clinicians, researchers payers, health facility managers, and policymakers.

**Contribution Based Priority Assessment in a Web Based Intelligent Argumentation Network for Collaborative Software Development** Jun 25 2022 "Decision making is an important aspect of the collaborative software development process which usually involves complex process of conflict resolution. Stakeholders approach decision making process from multiple perspectives and their priorities play a vital role in it. The priority assessment methods used in the argumentation process so far are usually static. Priorities remain constant throughout the decision making process. In order to make the collaborative system more closely replicate real-world scenarios, this work incorporates dynamic priority assessment into a web-based collaborative system which is based on intelligent computational argumentation. It evaluates priorities dynamically for each cycle of decision process based on contribution of individual participant. The contribution is assessed based on the impact of each participant's arguments on a winning design alternative. More successful participants have higher priorities in argumentations during collaboration. An empirical case study is conducted to evaluate effectiveness of dynamic priority assessment in improving quality of the argumentation based decision making"--Abstract, leaf iii.

**Risk Assessment and Indoor Air Quality** Jan 08 2021 With the recent tightening of air quality standards as mandated by the U.S. EPA, has come great pressure on regulatory bodies at all levels of government, along with the industries and groups affected by these standards, to better assess the hazards and risks that result from air pollutants. Risk Assessment and Indoor Air Quality carefully ties tog

**Working with Vulnerable Children, Young People and Families** Jun 13 2021 The potential for early intervention to prevent social problems later in life has become the focus of much debate in recent years and finds itself at the centre of contemporary social policy. The meaning of 'vulnerability' – one of the key concepts in this drive – is examined in this book, as well as the relationship between vulnerability and the individual, communities and society. This book introduces students to a broad debate around what constitutes vulnerability and related concepts such as risk and resilience, and examines how vulnerability has been conceptualised by policy makers with a clear focus on early intervention. Adopting a case study approach, it opens with chapters examining the concept of vulnerability from sociological, psychological and social policy perspectives before looking at examples around disability, homelessness, leaving care, victims of violence, sexual abuse, prison, the Internet and drug use. Supporting students in engaging with and evaluating the conceptualisation and application of vulnerability in professional practice, this book is suitable for anyone either preparing for or currently working within the children's workforce,

from social work and health care to education and youth work.

[An Assessment of the Communications Technology Laboratory at the National Institute of Standards and Technology](#) Dec 07 2020 An Assessment of the Communications Technology Laboratory at the National Institute of Standards and Technology: Fiscal Year 2019 is an independent technical assessment of the quality of the National Institute of Standards and Technology's (NIST's) Communications Technology Laboratory (CTL). It reviews the organization's technical programs, the portfolio of scientific expertise within the organization, the adequacy of the organization's facilities, equipment, and human resources, and the effectiveness by which the organization disseminates its program outputs. This report focuses on CTL priority areas such as public safety communications, trusted spectrum testing, and Next Generation Wireless (5G and Beyond). It also assesses the extent to which CTL applied the recommendations from a 2015 National Academies' report, which describes many of the critical uses of radio communications, provides lab-specific recommendations, and highlights important research priorities for the Boulder, Colorado communications technology laboratory of the Department of Commerce laboratory. This new report also describes the current activities of the Boulder telecommunications laboratories, its strengths and weaknesses as an organization, and its plans for the near future

[Expertise At Work](#) Aug 03 2020 Employees' expertise and competence are among the important success factors of today's work organizations. This special issue focuses on expertise and excellent performance within work settings, addressing questions such as: How do excellent performers proceed when accomplishing work tasks? Which strategies do they use? Which aspects of knowledge and behaviour are crucial for excellent work performance? How can you identify, select, and train excellent performers? Expertise at Work combines empirical studies and practitioners' approaches to these challenging issues. In addition, open peer commentaries are provided by academics and practitioners from a number of European countries.

**Setting Priorities for Clinical Practice Guidelines** Apr 23 2022 This book examines methods for selecting topics and setting priorities for clinical practice guideline development and implementation. Clinical practice guidelines are "systematically defined statements to assist practitioner and patient decisions about appropriate health care for specific clinical circumstances." In its assessment of processes for setting priorities, the committee considers the principles of consistency with the organization's mission, implementation feasibility, efficiency, utility of the results to the organization, and openness and defensibility—a principle that is especially important to public agencies. The volume also examines the implications of health care restructuring for priority setting and topic selection, including the link between national and local approaches to guidelines development.

*Conducting Psychological Assessment* Apr 11 2021 Praise for CONDUCTING PSYCHOLOGICAL ASSESSMENT "This new addition of Wright's useful text is a tour de force. No one else writes more clearly, practically, and helpfully than Wright about psychological assessment—especially about the complex process of case conceptualization. This book should be required reading in every graduate course on psychological assessment." —Stephen E. Finn, PhD, Founder, Center for Therapeutic Assessment "A. Jordan Wright's *Conducting Psychological Assessment* is a comprehensive step-by-step guide to every aspect of psychological testing and assessment. Blending clinical wisdom with rigorous empirical evidence, the author guides readers through every phase of the assessment process, from selecting appropriate measures and collecting test data through writing assessment reports and providing feedback to clients. Experienced clinicians, early career psychologists, and students will all benefit from this important book; it should be on every clinician's bookshelf." —Robert F. Bornstein, PhD, Derner School of Psychology, Adelphi University "Conducting Psychological Assessment (2nd ed) provides a clear, concise, practical guide to essential aspects of clinical assessment. Dr. Wright presents scholarly research, draws on extensive clinical experience, and illustrates his guidelines with rich case examples. Much of this information is typically not included in other assessment books, such as how to select tests, strategies to integrate contradictory data, and how to work with clients who disagree with assessment results. Accordingly, I recommend this to all health professionals involved with clinical assessment." —Gary Groth-Marnat, PhD, ABPP, ABAP
