*DIY Media* Sep 10 2020 Schools remain notorious for co-opting digital technologies to «business as usual» approaches to teaching new literacies. *DIY Media* addresses this issue head-on, and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school, and whose educational potential is not yet being tapped to any significant degree in classrooms. This book is very much concerned with engaging students in do-it-yourself digitally mediated meaning-making practices. As such, it is organized around three broad areas of digital media: moving media, still media, and audio media. Specific DIY media practices addressed in the chapters include machinima, anime music videos, digital photography, podcasting, and music remixing. Each chapter opens with an overview of a specific DIY media practice, includes a practical how-to tutorial section, and closes with suggested applications for classroom settings. This collection

will appeal not only to educators, but to anyone invested in better understanding - and perhaps participating in - the significant shift towards everyday people producing their own digital media.

Mastering Apple Music Aug 29 2019 Apple Music is, to quote the company, "All the ways you love music. All in one place." In non-marketing lingo, Apple Music is built around two major components: iCloud Music Library, which combines your purchased music library and ripped tracks in one place; and the Apple Music streaming catalog, where you can find more than 10 million tracks from artists around the world. These two parts live side by side in the Music

app: You can keep each separate by only streaming the Apple Music catalog, or you can add streaming songs to your offline Music library, where they can be mixed into playlists (offline or publicly shareable) or shuffled amongst the rest of your music. Apple Music also offers a massive recommendation and browsing area for its streaming catalog: As you listen to songs in the Music app, Apple collects data about your tastes and drops daily custom-curated playlists in the app for you to listen to, along with a weekly algorithmic "New Music" mix that suggests songs and artists you might like. You can also poke around the entire streaming catalog's array of new music, curated playlists, music videos, and more.
