**Individuals and Identity in Economics** Jun 28 2022 This book examines the different conceptions of the individual that have emerged in recent new approaches in economics, including behavioral economics, experimental economics, social preferences approaches, game theory, neuroeconomics, evolutionary and complexity economics, and the capability approach. These conceptions are classified according to whether they seek to revise the traditional atomist individual conception, put new emphasis on interaction and relations between individuals, account for individuals as evolving and self-organizing, and explain individuals in terms of capabilities. The method of analysis uses two identity criteria for distinguishing and re-identifying individuals to determine whether these different individual conceptions successfully identify individuals. Successful individual conceptions account for sub-personal and supra-personal bounds on single individual explanations. The former concerns the fragmentation of individuals into multiple selves; the latter concerns the dissolution of individuals into the social. The book develops an understanding of bounded individuality, seen as central to the defense of human rights.

**The Natural Origins of Economics** Nov 02 2022 References to the economy are ubiquitous in modern life, and virtually every facet of human activity has capitulated to market mechanisms. In the early modern period, however, there was no common perception of the economy, and discourses on money, trade, and commerce treated economic phenomena as properties of physical nature. Only in the early nineteenth century did economists begin to posit and identify the economy as a distinct object, divorcing it from natural processes and attaching it exclusively to human laws and agency. In *The Natural Origins of Economics*, Margaret Schabas traces the emergence and transformation of economics in the eighteenth and nineteenth centuries from a natural to a social science. Focusing on the works of several prominent economists—David Hume, Adam Smith, Thomas Malthus, David Ricardo, and John Stuart Mill—Schabas examines their conceptual debt to natural science and thus locates the evolution of economic ideas within the history of science. An ambitious study, *The Natural Origins of Economics* will be of interest to economists, historians, and philosophers alike.

**The Origins of David Hume's Economics** Jan 24 2022 The book covers Hume's biographical development; his self appraisal as a 'man of letters'; his philosophical writings with emphasis on their direct and indirect economic content; his self-aware criticism of his approach to the *Treatise* and the development of his rhetorical understanding of the needs/interests of his readers/potential readers; his rhetorical turn and Ciceronian adjustments to his writing within the genre of the essay, including his two *Enquiries*; his political essays and his nine essays conventionally classified as economic. The work aims to show how the *Treatise* and its vicissitudes gave rise to his economics. The work takes a broad approach to Hume and his writings on economic topics from the *Treatise*, through the *Enquires* and on to his political and economic essay. The work also explores Hume's textual method and charts the move from abstruse philosophy to a Ciceronian engagement with social conditions and problems as developed in the *Political Discourses*. In addition, Hume's extensive use of analogies is also brought into clearer focus than is found in other texts. Overall, the book will be of great use to both postgraduates and undergraduates alike.

**Automatic Classification of Non-Functional Requirements From App Store Reviews. Reviewing and Applying Approaches From Current Research** Sep 19 2021 Bachelor Thesis from the year 2021 in the subject Business economics - Miscellaneous, grade: 1,3, University of Mannheim, language: English, abstract: The thesis addresses a part of the requirements engineering process (RE), namely the treatment of non-functional requirements. Requirements are commonly divided into functional requirements (FRs) and non-functional requirements (NFRs). NFRs address the non-functional aspects of a system, for example, its user interface. The thesis lays the theoretical background and explores the general nature of NFRs including different taxonomies of NFRs. It then looks closely at NFRs in the context of mobile applications. In their marketplaces, so-called App Stores, users can express their opinion about an app after downloading and using it. Software developers can collect requirements straight from these reviews. This can help them improve their software to meet users' expectations. Due to the vast amount of review data manual inspection is tedious, time-consuming, cumbersome, or even infeasible. Tools to automatically classify such reviews might aid with this problem. However, there is still no solution to

automatically extract NFRs from app store reviews and classify them into different types in practice. The thesis, therefore, assesses the current state of research in developing automated solutions to classify NFRs from app store reviews. It analyzes several past approaches to automatically classify NFRs from app store reviews using machine learning and looks at the performance of different algorithms used for these approaches. It states that the so-called Support Vector Machine (SVM) algorithm performed best in the settings analyzed. The second practical part of the thesis then applies this SVM algorithm onto a given dataset with labeled reviews using Python. The reviews are classified into either one of these categories or no category at all: Usability, Dependability, Performance, and Supportability.

**The Economics of Social Determinants of Health and Health Inequalities** Oct 01 2022 "This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

**Economics Does Not Lie** Apr 14 2021 In 2005, *The Woman at the Washington Zoo* was published to major critical acclaim. The late Marjorie Williams possessed "a special voice, one capable not just of canny political observations but of tenderness and bracing intimacy," observed the *New York Times Book Review*. Now, in a collection of profiles with the richness of short fiction, Williams limns the personalities that dominated politics and the media during the final years of the twentieth century. In these pages, Clark Clifford grieves "in his laborious baritone" a bank scandal's blow to his re-pu-taaaaaay-shun. Lee Atwater likens himself to Ulysses and pleads, "tah me to the mast!" Patricia Duff sheds "precipitous tears" over her divorce from Ronald Perelman, resembling afterwards "a garden refreshed by spring rain." Reputation illuminates our recent past through expertly drawn portraits of powerful - and messily human - figures.

**Economics of food processing in the United States** Oct 28 2019 Economics of Food Processing in the United States aims to provide an economic overview of the food processing industries in the United States; to explore the firm-level implications of social, economic, technological, and institutional forces for selected food processing industries; and to uncover some of the implications for consumers, raw product producers, and the national economy of the major trends observed in food industries. The book begins by evaluating the major forces shaping demand, supply, prices, and trade in processed foods. It then considers major trends in technical processes; major forces in marketing, distribution, and structure; and major trends in regulation. The next few chapters explore these trends for five specific food processing industries, which represent major types of products processed: fruits and vegetables, meat, milk, grain and soybeans, and wine. After the specific industries have been examined, the final two chapters treat these industries in the context of the national and international economy. Students preparing for careers, researchers, and industry participants who study these firms and industries and the various approaches to solving their economic and management problems will benefit from the information in this volume and from its approach to presenting the dynamics of the food processing industries.

**Money and Government** Jul 30 2022 A critical examination of economics' past and future, and how it needs to change, by one of the most eminent political economists of our time The dominant view in economics is that money and government should play only minor roles in economic life. Economic outcomes, it is claimed, are best left to the "invisible hand" of the market. Yet these claims remain staunchly unsettled. The view taken in this important new book is that the omnipresence of uncertainty makes money and government essential features of any market economy. Since Adam Smith, classical economics has espoused non-intervention in markets. The Great Depression brought Keynesian economics to the fore; but stagflation in the 1970s brought a return to small-state orthodoxy. The 2008 global financial crash should have brought a reevaluation of that stance; instead the response has been punishing austerity and anemic recovery. This book aims to reintroduce Keynes's central insights to a new generation of economists, and embolden them to return money and government to the starring roles in the economic drama that they deserve.

**Handbook of Defense Economics** Mar 14 2021 The second volume of the Handbook of Defense Economics addresses defense needs, practices, threats, and policies in the modern era of globalization. This new era concerns the enhanced cross-border flows of all kinds (e.g., capital and labor flows, revolutionary rhetoric, guerrillas, and terrorists) including the spillovers of benefits and costs associated with public goods and transnational externalities (i.e., uncompensated interdependencies affecting two or more nations). These ever-increasing flows mean that military armaments and armies are less able to keep out security threats. Thus, novel defense and security barriers are needed to protect borders that are porous to terrorists, pollutants, political upheavals, and conflicts. Even increased trade and financial flows imply novel security challenges and defenses. Globalization also underscores the importance of a new set of institutions (e.g., the European Union and global governance networks) and agents (e.g., nongovernmental organizations and partnerships). This volume addresses the security challenges in this age of globalization, where conflicts involve novel tactics, new technologies, asymmetric warfare, different venues, and frightening weapons. Volume 2 contains topics not covered in volume 1 – i.e., civil wars, peacekeeping, economic sanctions, the econometrics of arms races, conversion, peace economics, and the interface of trade, peace, and democracy. Volume 2 also revisits topics from volume 1, where there has been a significant advancement of knowledge – i.e., conflict analysis, terrorism, arms races, arms trade, military manpower, and arms industries. All of the main securities concerns of today are analyzed. Chapters are written by the leading contributors in the topic areas. \*Up-to-date surveys on the pressing defense issues: theoretical, empirical and policy issues. \*Coverage of theoretical and empirical studies of terrorism. \*Contributions by the leading researchers in the field of defense economics.

*The Beginnings of Behavioral Economics* Oct 09 2020 The Beginnings of Behavioral Economics: Katona, Simon, and Leibenstein's X-Efficiency Theory explores the mid-20th century roots of behavioral economics, placing the origin of this now-dominant approach to economic theory many years before the groundbreaking 1979 work on prospect theory by Daniel Kahneman and Amos Tversky. It discusses the work of Harvey Leibenstein, Herbert Simon, George Katona, and Frederick Hayek, reintroducing their contributions as founding pillars of the behavioral approach. It concentrates on the work of Leibenstein, reviewing his nuanced introduction of X-efficiency theory. Building from these foundations, the work explores the body of empirical research on market power and firm behavior – XE relationship. This book is a tremendous resource for graduate students and early career researchers in behavioral economics, experimental economics, organizational economics, social and organizational psychology, labor market economics and public policy. Reviews the powerful, but neglected contributions of mid-20th century scholars, like Leibenstein and Katona in building the roots of behavioral economic theory Amalgamates and reviews 50 years of empirical research and over 200 empirical papers on X-efficiency theory Establishes how X-efficiency can aid modern behavioral economics in further developing firm theory and understanding efficiency wages

**The Political Economy of Policy Reform** Jul 06 2020 Policymakers around the world have increasingly agreed that macroeconomic discipline, microeconomic liberalization, and outward orientation are prerequisites for economic success. But what are the political conditions that make economic transformation possible? At a conference held at the Institute for International Economics, leaders of economic reform recounted their efforts to bring about change and discussed the impact of the political climate on the success of their efforts. In this book, these leaders explore the political conditions conducive to the success of policy reforms. Did economic crisis strengthen the hands of the reformers? Was the rapidity with which reforms were instituted crucial? Did the reformers have a "honeymoon" period in which to transform the economy? The authors answer these and other questions, as well as providing first-hand accounts of the politically charged atmosphere surrounding reform efforts in their countries.

**Toward a More Perfect University** Aug 26 2019 Education has been disrupted dramatically by culture, technology and economics. The only certainty about the universities of the future is that they will not thrive if left unchanged. Jonathan Cole, John Mitchell Mason Professor at Columbia University, and its former provost, is one of the country's leading academic researchers into higher education. A fierce champion of the merits and benefits of the great American research university, Cole identifies the potential fault-lines that threaten the future of universities and the strategic changes that successful colleges will have to make in order to preserve their intellectual relevance, economic viability and social mission. In turn he examines: Admissions policies; Examinations; Cost; Undergraduate education; The role of the humanities The place for professional schools; Research campuses of the future; Sports; Leadership and governance; The intellectual and legal threats to academic freedom. Using his deep knowledge of the history and traditions that underpin US higher education, Cole separates the essential from the fashionable. Higher education is a vital national resource, and an economic proving ground. It is the bedrock of American business and society and it must adapt in order to remain globally competitive and intellectually valuable. The culture of the great American universities reflects the moral and social foundations of the republic itself: they are a litmus test of values and philosophies, and their future affects everyone.
