Science, the Endless Frontier Oct 21 2021 This influential report described science as "a largely unexplored hinterland" that would provide the "essential key" to the economic prosperity of the post World War II years.

Strengthening Forensic Science in the United States Jan 24 2022 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Science and Technology Policy Jan 12 2021 I was asked recently to prepare an independent background report on the subject of priority assessment in science and technology policy for the Australian Science and Technology Council. The Council (while not necessarily endorsing this book) suggested that a wider audience could be interested in the type of material contained in my report and kindly gave me permission to publish the material in my own right. The present book contains this and other material, some of which was presented at a seminar on National Science Policy: Implications for Government Departments arranged by the Department of Science and the Environment. Additional ideas were developed in response to comments on the manuscript by referees, as a result of discussions with Professor John Metcalfe and Dr Peter Stubbs of Manchester University, a conversation with Dr Keith Hartley of the University of York and in the wake of a communication from Dr Ken Tucker, Assistant Director, Bureau of Industry Economics, Australia. Science and technology policy affects and concerns everyone of us if for no other reason than we cannot escape in this interdependent world from the economic, social and environmental ills generated by science and technology. We must face the problems and promises inherent in new and existing science and technology whether we like it or not. Not surprisingly this book finds that all

industrialized countries seem to be facing similar economic and social problems.

Government of Paper Nov 02 2022 "Drawing inspiration from actor-network theory, science studies, and semiotics, this brilliant book makes us completely rethink the workings of bureaucracy as analyzed by Max Weber and James Scott. Matthew Hull demonstrates convincingly how the materiality of signs truly matters for understanding the projects of 'the state.'" - Katherine Verdery, author of *What was Socialism, and What Comes Next?* "We are used to studies of roads and rails as central material infrastructure for the making of modern states. But what of records, the reams and reams of paper that inscribe the state-in-making? This brilliant book inquires into the materiality of information in colonial and postcolonial Pakistan. This is a work of signal importance for our understanding of the everyday graphic artifacts of authority." - Bill Maurer, author of *Mutual Life, Limited: Islamic Banking, Alternative Currencies, Lateral Reason* "This is an excellent and truly exceptional ethnography. Hull presents a theoretically sophisticated and empirically rich reading that will be an invaluable resource to scholars in the field of Anthropology and South Asian studies. The author's focus on bureaucracy, "corruption," writing systems and urban studies (Islamabad) in a post-colonial context makes for a unique ethnographic engagement with contemporary Pakistan. In addition, Hull's study is a refreshing voice that breaks the mold of current representation of Pakistan through the security studies paradigm." - Kamran Asdar Ali, Director, South Asia Institute, University of Texas

Writing a Research Paper in Political Science Nov 29 2019 Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Crafting the right research question, finding good sources, properly summarizing them, operationalizing concepts and designing good tests for their hypotheses, presenting and analyzing quantitative as well as qualitative data are all tough-going without a great deal of guidance and encouragement. *Writing a Research Paper in Political Science* breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated and

more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it.
