Waves Oct 28 2019 Waves are everywhere in our daily life. We all experience sound and light with our ears and eyes, we use microwaves to cook, and radio waves are transmitted from and are received by our cell phones. These are just some examples of waves that carry energy from point A to B. However, we may not know details of the physics underlying all these waves. It is important to understand the mechanisms that generate wave dynamics for a given system. It is not straightforward to explain how an electromagnetic field becomes oscillatory and propagates as a wave. Waves sometimes represent the underlying dynamics of observed phenomena at a fundamental level of physics. This book is designed to explore these mechanisms by discussing various aspects of wave dynamics from as many perspectives as possible. The target audiences are undergraduate students majoring in engineering science and graduate students majoring in general engineering. Going beyond the typical approach to learning science, this book discusses wave dynamics and related concepts at various levels of mathematics and physics, sometimes touching on profound physics behind them. This book was written to help readers learn wave dynamics on a deep physical level, and develop innovative ideas in their own fields.

The Waves Burn Bright Sep 27 2019 In 1988 the Piper Alpha oil platform off the coast of Aberdeen, Scotland exploded, killing 167 men. The Waves Burn Bright is a deeply effecting, sensitive exploration of its devastating aftermath on one family. Carrie Fraser is 16 when the disaster occurs, her father Marcus one of the survivors. As the narrative moves between past and present the trauma blows open existing fractures, tearing the family apart. In adulthood and after many years living abroad, Carrie, now a respected volcanologist, is returning to Aberdeen to deliver a controversial academic paper. Carrie and her father are estranged, partly due to his post-traumatic stress and related alcoholism, a legacy of Piper Alpha. Will a reconciliation be possible or will the aftershocks of a tragedy that occurred 25 years before continue to drive father and daughter apart? ‘A cauldron of a book, bubbling with anger and magma which might at any moment spill over and bring further devastation. It is both particular to this tragedy in 1988, but also universal; a compelling story exploring how a father’s trauma sends shock waves through a family, changes the pattern of lives – particularly his daughter’s – and makes love risky. However, as well as being about damage and running away, it is also about healing.’ Linda Cracknell, author of Call of the Undertow and Doubling Back 'it wasn't so much that Maloney's characters had made an impact on my world, but that I had entered theirs... simply a cracking good read.' Alison Miller, author of Demo

Count the Waves: Poems Apr 26 2022 “Beasley uses humor and surprise like a scythe, cutting to the root of a matter.”—Washington Post In Count the Waves, Sandra Beasley turns her eclectic imagination to the heart’s pursuits. A man and a woman sit at the same dinner table, an ocean of worry separating them. An iceberg sets out to dance. A sword swallower ponders his dating prospects. "The vessel is simple, a rowboat among yachts," the poet observes in "Ukulele." "No one hides a Tommy gun in its case. / No bluesman runs over his uke in a whiskey rage." Beasley's voice is pithy and playful, with a ferocious intelligence that invites comparison to both Sylvia Plath and Dorothy Parker. In one of six signature sestinas, she warns, "You must not use a house to build a home, / and never look for poetry in poems." The collection’s centerpiece is a haunting sequence that engages The Traveler’s Vade Mecum, an 1853 compendium of phrases for use by mail, telegraph, or the enigmatic “Instantaneous Letter Writer." Assembled over ten years and thousands of miles, these poems illuminate how intimacy is lost and gained during our travels. Decisive, funny, and as compassionate as she is merciless, Beasley is a reckoning force on the page.

Riding the Waves Feb 22 2022 The life and work of Renaissance man Leo Beranek: scientist, professor, engineer, business leader, inventor, entrepreneur, musician, television executive, philanthropist, and author. Leo Beranek, an Iowa farm boy who became a Renaissance man—scientist, inventor, entrepreneur, musician, television executive, philanthropist, and author—has lived life in constant motion. His seventy-year career, through the most tumultuous and transformative years of the last century, has always been propelled by the sheer exhilaration of trying something new. In *Riding The Waves*, Leo Beranek tells his story. Beranek's life changed direction on a summer day in 1935 when he stopped to help a motorist with a flat tire. The driver just happened to be a former Harvard professor of engineering, who guided the young Beranek toward a full scholarship at Harvard's graduate school of engineering. Beranek went on to be one of the world's leading experts on acoustics. He became Director of Harvard's Electro-Acoustic Laboratory, where he invented the Hush-A-Phone—a telephone accessory that began the chain of regulatory challenges and lawsuits that led ultimately to the breakup of the Bell Telephone monopoly in the 1980s. Beranek moved to MIT to be a professor and Technical Director of its Acoustics Laboratory, then left academia to found the acoustical consulting firm Bolt, Beranek and Newman. Known for his work in noise control and concert acoustics, Beranek devised the world's largest muffler to quiet jet noise and served as acoustical consultant for concert halls around the world (including the Tanglewood Music Shed, the storied summer home of the Boston Symphony Orchestra). As president of BBN, he assembled the software group that invented both the ARPANET, the forerunner of the Internet, and e-mail. In the 1970s, Beranek risked his life savings to secure the license to operate a television station; he turned Channel 5 in Boston into one of the country's best, then sold it to Metromedia in 1982 for the highest price ever paid up to that time for a broadcast station. “One central lesson I’ve learned is the value of risk-taking and of moving on when risks turn into busts or odds look better elsewhere,” Beranek writes. *Riding The Waves* is a testament to the boldness, diligence, and intelligence behind Beranek's lifetime of extraordinary achievement. Leo Beranek is a pioneer in acoustical research, known for his work in noise control and the acoustics of concert halls, and the author of twelve books on these topics. The many awards he has received include the Presidential National Medal of Science, presented in 2003.

Sons of the Waves Dec 23 2021 "[A] rollicking narrative . . . Superb"--Ben Wilson, *Times* ?A brilliant telling of the history of the common seaman in the age of sail, and his role in Britain's trade, exploration, and warfare British maritime history in the age of sail is full of the deeds of officers like Nelson but has given little voice to plain, "illiterate" seamen. Now Stephen Taylor draws on published and unpublished memoirs, letters, and naval records, including court-martials and petitions, to present these men in their own words. In this exhilarating account, ordinary seamen are far from the hapless sufferers of the press gangs. Proud and spirited, learned in their own fashion, with robust opinions and the courage to challenge overweening authority, they stand out from their less adventurous compatriots. Taylor demonstrates how the sailor was the engine of British prosperity and expansion up to the Industrial Revolution. From exploring the South Seas with Cook to establishing the East India Company as a global corporation, from the sea battles that made Britain a superpower to the crisis of the 1797 mutinies, these "sons of the waves" held the nation's destiny in their calloused hands.

In the Waves Oct 01 2022 One of "The Most Fascinating Books WIRED Read in 2020" "One part science book, one part historical narrative, one part memoir . . . harrowing and inspiring.”—The Wall Street Journal How a determined scientist cracked the case of the first successful—and disastrous—submarine attack On the night of February 17, 1864, the tiny Confederate submarine HL Hunley made its way toward the USS Housatonic just outside Charleston harbor. Within a matter of hours, the Union ship’s stern was blown open in a spray of wood planks. The explosion sank the ship, killing many of its crew. And the submarine, the first ever to be successful in combat, disappeared without a trace. For 131 years the eight-man crew of the HL Hunley lay in their watery graves, undiscovered. When finally raised, the narrow metal vessel revealed a puzzling sight. There was no indication the blast had breached the hull, and all eight men were still seated at their stations—frozen in time after more than a century. Why did it sink? Why did the men die? Archaeologists and conservationists have been studying the boat and the remains for years, and now one woman has the answers. In the Waves is much more than just a military perspective or a technical account. It’s also the story of Rachel Lance’s single-minded obsession spanning three years, the story of the extreme highs and lows in her quest to find all the puzzle pieces of the Hunley. Balancing a gripping historical tale and original research with a personal story of professional and private obstacles, In the Waves is an enthralling look at a unique part of the Civil War and the lengths one scientist will go to uncover its secrets.

Across the Waves Jun 04 2020 In 1931, the United States and France embarked on a broadcasting partnership built around radio. Over time, the transatlantic sonic alliance came to personify and to shape American-French relations in an era of increased global media production and distribution. Drawing on a broad range of American and French archives, Derek Vaillant joins textual and aural materials with original data analytics and maps to illuminate U.S.-French broadcasting's political and cultural development. Vaillant focuses on the period from 1931 until France dismantled its state media system in 1974. His analysis examines mobile actors, circulating programs, and shifting governmental and other institutions shaping international radio's use in times of war and peace. He explores the extraordinary achievements, the miscommunications and failures, and the limits of cooperation between America and France as they shaped a new media environment. Throughout, Vaillant explains how radio's power as an instantaneous mass communications tool produced, legitimized, and circulated various notions of states, cultures, ideologies, and peoples as superior or inferior.

To Rule the Waves Jul 30 2022 From a brilliant Brookings Institution expert, an “important” (The Wall Street Journal) and “penetrating historical and political study” (Nature) of the critical role that oceans play in the daily struggle for global power, in the bestselling tradition of Robert Kaplan’s *The Revenge of Geography*. For centuries, oceans were the chessboard on which empires battled for supremacy. But in the nuclear age, air power and missile systems dominated our worries about security, and for the United States, the economy was largely driven by domestic production, with trucking and railways that crisscrossed the continent serving as the primary modes of commercial transit. All that has changed, as nine-tenths of global commerce and the bulk of energy trade is today linked to sea-based flows. A brightly painted forty-foot steel shipping container loaded in Asia with twenty tons of goods may arrive literally anywhere else in the world; how that really happens and who actually profits from it show that the struggle for power on the seas is a critical issue today. Now, in vivid, closely observed prose, Bruce Jones conducts us on a fascinating voyage through the great modern ports and naval bases—from the vast container ports of Hong Kong and Shanghai to the vital naval base of the American Seventh Fleet in Hawaii to the sophisticated security arrangements in the Port of New York. Along the way, the book illustrates how global commerce works, that we are amidst a global naval arms race, and why the oceans are so crucial to America’s standing going forward. As Jones reveals, the three great geopolitical struggles of our time—for military power, for economic dominance, and over our changing climate—are playing out atop, within, and below the world’s oceans. The essential question, he shows, is this: who will rule the waves and set the terms of the world to come?

Ben Franklin Stilled the Waves Aug 19 2021 When Benjamin Franklin, the 18th-century American statesman and scientist, watched the calming effect of a drop of oil on the waves and ripples of a London pond, he was observing what Pliny the Elder and generations of seafarers had done before him. Franklin, though, was the first to wonder exactly what was happening to the oil, and to investigate this strange phenomenon. Following Franklin’s lead, a motley crowd of scientists over the next two centuries and more chose to investigate the nature of atoms and molecules through the interaction of fluid membranes. They included Lord Rayleigh, an altruistic English Lord, Agnes Pockels, who conducted experiments in her kitchen and became one of the earliest women to make lasting contributions to science, the renowned Dutch pediatrician Evert Gorter, and Irving Langmuir, one of America’s greatest industrial scientists. Building on Franklin’s original experiments, their work has culminated in the discovery of the structure of cell membranes, research that continues to bear fruit today. *Ben Franklin Stilled the Waves* is far more than the story of oil on water; it is a voyage into the very nature of science and its place in our history.

At Home on the Waves Nov 21 2021 Contemporary public discourses about the ocean are routinely characterized by scientific and environmentalist narratives that imagine and idealize marine spaces in which humans are absent.
